LinkedIn: [linkedin.com/in/abdullahibnyousuf](https://www.linkedin.com/in/abdullahibnyousuf) | GitHub: github.com/AbdullahIbnYousuf

Second-year Computer Science and Engineering student at Islamic University of Technology, focused on AI-assisted software, backend systems, and practical product development. Currently a Machine Learning Intern at FlyRank AI and founder of MayX Labs, an early-stage software and AI studio with active paid client work. Experienced in building real-use web applications and developing hackathon products from idea to working prototype.

Experience

FlyRank AI

Jun 2026 – Present

Machine Learning Intern

- Participate in a project-based internship focused on machine-learning fundamentals, data preparation, experimentation, evaluation, and practical implementation.
- Apply concepts through technical exercises and project tasks while documenting progress and strengthening practical AI/ML development skills.

MayX Labs, Gazipur

May 2026 – Present

Founder / Software & AI Builder

- Lead an early-stage software and AI studio building digital products, automation solutions, and AI-assisted systems for paid client work and internal product experiments.
- Translate business needs into scoped features, technical plans, working prototypes, and delivered software while handling development and coordination.

IUT Computer Society

Jan 2026 – Present

Junior Executive, Logistics

- Coordinate venues, equipment, resources, and on-site operations for technical events, workshops, and competitions alongside cross-functional student teams.
- Active in the society since Sep 2024, initially as a General Member before moving into the Junior Executive role.

Projects

- AgentLens:** Developed the backend for an AI-assisted fintech decision-support system for mobile financial-service agents managing shared cash and separate bKash, Nagad, and Rocket balances. Implemented provider-aware liquidity forecasting, explainable unusual-activity review, confidence-aware outputs, fallback behaviour, and human-reviewed case workflows. *Python, FastAPI, PostgreSQL, XGBoost, Isolation Forest.*
- Office Energy Dashboard:** Built most of the end-to-end system for monitoring a simulated smart office with three rooms and fifteen devices. Developed the frontend, backend, real-time power tracking, device controls, alerts, and Discord bot integration. *React, TypeScript, Node.js, Express, Socket.IO.*
- MessManage** (*in active daily use*): Designed, built, and deployed a web application used by a shared student residence to manage meals, members, expenses, financial records, and monthly settlements. Developed the system around recurring real-world operational needs rather than a one-time demonstration. *Next.js, TypeScript, PostgreSQL, Vercel.*
- CareerPilot:** Led most of the end-to-end development of an AI-assisted career-guidance platform that analyzes a user's CV and profile context to generate personalized career insights and preparation recommendations. Implemented the core application workflow, a RAG-based process for grounding recommendations in relevant CV and career information, prompt design, AI API integration, frontend/backend integration, and the final hackathon prototype.
- Vantage Arm Simulator:** Developed the backend and control layer for a browser-based 3D environment for a 6-DOF robotic arm, supporting inverse kinematics, validated commands, multi-input control, autonomous motion planning, emergency-stop functionality, and safety-focused movement boundaries.

Education

Islamic University of Technology (IUT), Board Bazar, Gazipur

Sep 2024 – Expected 2028

B.Sc. in Computer Science and Engineering, 2nd Year

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Databases, Discrete Mathematics, Operating Systems, Computer Networks

Skills

Programming Languages: C, C++, Python, JavaScript, TypeScript, SQL

Frontend: React, Next.js, Vite, Tailwind CSS, HTML/CSS

Backend & Database: Node.js, Express, FastAPI, REST APIs, PostgreSQL, Supabase

AI Development: AI API Integration, RAG-based Workflows, Prompt Engineering, AI-Assisted Application Development

Tools & Platforms: Linux, Git, GitHub, VS Code, Postman, Vercel, Kaggle, OpenAI Codex, Google Antigravity

Achievements

- 5th Place Nationally** – Codex Community Hackathon, SUST CSE Carnival 2026; placed fifth among approximately 750 participating teams.
- Top 26 National Finalist** – Techathon Nationals and Rover Summit 2026.
- Top 14 Finalist** – CodeSprint '26; selected among the top 14 teams from more than 51 participating teams.
